### **Abstract:**

In this article we will look at why the role of the teacher is important and what functions he performs in the modern world.

**Keywords:** teacher, development, formation, values, functions of a teacher.

In the modern world, the role of a teacher plays a key role in shaping society and developing the individuality of each person. The teacher not only conveys knowledge, but also educates, develops critical thinking, and forms the value orientations of students.

Firstly, the teacher is not only a source of knowledge, but also a role model. The teacher's attitude towards his profession, his culture of communication, worldview - all this influences the formation of the student's personality. A teacher is able to inspire a student to self-development, help him find his calling and understand his goals.

Secondly, the teacher helps develop students' critical thinking. In the modern world there is so much information that it is very important to be able to analyze and filter it. The teacher helps students develop critical thinking skills and helps them develop an analytical mindset.

In addition, the teacher plays an important role in shaping the value orientations of students. He helps them understand what good and evil, honesty and decency are. The teacher is a role model in this regard, and his behavior and worldview have a great influence on the formation of students' values.

Also, the teacher is a mediator between the family and the student, playing an important role in maintaining communication and interaction between them. He has the ability to understand the needs of each student and find an approach to them, which helps create a favorable educational environment.

A modern teacher is a psychologist, a methodologist, a mentor, and a friend who teaches and trains subject skills. Students come to the teacher for information, knowledge, advice and support.

To cope with their responsibilities, teachers must be empathetic, patient, objective and able to understand what their students say and do. They also need to have good communication skills, be open and friendly in order to connect with children and communicate their ideas better. Leadership, influencing, thoughtfulness and creativity are also important.

Working as a teacher means constantly participating in the life of the class; this is one of the few professions that is equated to a vocation. Teachers solve the following tasks:

- ✓ explanation of new material;
- ✓ checking homework;
- ✓ control of knowledge acquisition;
- ✓ identifying the abilities and inclinations of students, analyzing the characteristics of individual students;
- ✓ organizing class meetings, consulting students and parents on educational issues;
- ✓ organization of extracurricular meetings and events;
- ✓ development of training programs;
- ✓ filling out logs, reports and other documents.

Teachers must not only teach, they must constantly improve their qualifications, study and apply new teaching methods, and improve the presentation of material.

The role of a teacher is “a set of normative provisions (requirements) for behavior required in a specific educational context, imposed on the professional behavior of an educator, controlled by his own and others’ ideas about this role.”

The most important goal of school education is not the simple transfer of knowledge from teacher to student, but the formation of the “ability to learn” (the ability to learn), i.e. the subject’s ability for self-development and self-improvement through the conscious and active use of new social experience. The modern primary school teacher is assigned a new role - moderator, educator, consultant and psychologist. Teachers play an important role in the formation of a new knowledge society and should be an example of constantly updating their knowledge, mastering advanced technologies, and developing creative and humane thinking.

In general, the role of a teacher in the modern world is invaluable, and his influence on the formation of the personality of students and the development of society as a whole is very significant. The teacher is responsible for the future generation and plays a key role in shaping society, so his role must be recognized and supported by society.
